This is the Halftime Semi-annual report July 26, 2026.

A review from Jan 1 to June 30. 2026

by Mohammed Lodhi Hussain

Figure 1 Hi it's Mohammed Lodhi Hussain Nice to see you.

Welcome Home! Let's Chat.

How are you?

This is the Halftime Semi-annual report for:

https://sundays7pm.com and https://fanslovebands.com

These are my core value creators and I decided to follow the famous founding father and overall renaissance man Benjamin Franklin. His story is a fascinating one.[1]

I decided to review the last six months for the sundays7pm.com and fanslovebands.com. Here is the short list based on Pros and Cons of each decision.

[1] From The way to Wealth by Benjamin Franklin to his Almanacs. And to yummy sounding Apple dumplings. WE have a lot to thank for our cordial and astute partier. Benjamin Franklin.

Note: these Pros and Cons ideas are interchangeable for both:

https://sundays7pm.com and https://fanslovebands.com

Issue	Pros	Cons
Reposting to online stores	Mass market.	Media quality suffers at the expense of ease.
Growth Plans	Sizable growth in unique visitors and stickiness to site over the last 6 months.	Outstanding growth in the last few months the site has been active.
Marketing budget	None Low and No budget social media word of mouth. Grassroots strategy. I applied my experience in Politics to win over a guest one person at a time. My goal is to keep multigenerational lifelong listens	None

Capital expenditure	NO staff or overhead. One man project for the near future I suppose.	Overhead or committees or boardrooms to tussle with. Been there done that.
The working Muscle of a website: Content	Steadily growing in contact. Probably will need to consider expanding content availability from hosting services. https://sundays7pm.com has become my clearinghouse of thought. I play around with ideas in a structured WordPress system. My goal piece is to develop my on chat	With https://fanslovebands.com the site and the content are both experimental. Since I have a brief background in Computers. Just as a hobbyist at best and High school trained computer developer at the middle. It is an issue. Because the learning curve and the challenges I deal with daily require reflection more than responses.

	system. It's harder than you may believe.	If you got your thinking right you are 80 to 90 percent there. However, unless you are 100% accurate things can go bad fast. That's why I love my learning curve with HTML, JavaScript and do not have a clue about CSS. I think we will do alright.
ROI	It is a labor of love from me. Free to the world.	How will it be valuated? It is a fair question. I do not know if I have the answer to that, yet!

My Observations

I want to discuss a couple technological, consumer trends and building AI centers plus misc. topics that will be of interest to you or it may be just me.

1. **A.I. isn't cutesy no more.**

A,I, is here. "Haste La Vista, Baby![2] The movie that gave us a reversed glimpse into the AI future. But I think it is also like the movie Matrix with Keanu Reeves. You the phrase "Life imitates Art." Or vice versa. So should we open data centers. Capital investments' in a frothy market tend to spoke investors. However, the old maxim is always values growth. Legitimate growth win over the long term. There is one major problem.

2. **No A.I. Leaders can separate the Just from the Jargon.**

We need someone to promote A.I.'s positive outlook. No one clear leader has emerged to Sheppard this A.I. tsunami that is about to hit

[2] That is from the science fiction movie Terminator Directed by James Cameron and Starring Arnold Schwartzinggar.

landfall in the United States of America. Why is this important? Because anyone with a computer degree or affinity to computers can wreak havoc on digital infrastructure. Not only do we need to fortify to the castle walls. We need A.I. offensive technologies to penetrate at the global perpetrators at the source. Yes, this boring cybersecurity basics 101. A.I. can be like a trusting friend. Who's faith is questioned every day. Main point use A.I. before the other side does and we pay the price for the cleanup. I would not know the total cost to the over federal deficit. But it could easily have tens of trillions dollars yearly. And inhibit growth of more lucrative opportunities elsewhere. Where our minds are free and clear.

3. Consumer Trends Point to Anti-tech reliance and resilience

Are we leaning to less demanding digital footprint. In hindsight it might have been better to skip cellphones altogether. However, the world is more connected place then if cellphones were not around.

As consumer trends shift there will be a cornucopia of opportunities for the enterprising investor and the value investor. It may take a longer time horizon then we say in the flareups of the dot coms era of the 1990s. I was shielded mostly from that universe mainly because I had school.

In conclusion, this was a brief addendum to the last 6 months. IF you have any particular questions for me.
